

Olist dataset table relationships

Eleven tables, every column shown. Solid lines are key relationships. Dashed lines are loose zip code matches, since geolocation has no primary key.

Key	
Lines	
	Key relationship. One table's key points to another table.
	Loose match on zip prefix. Geolocation has no primary key.
Line ends, read at the table they touch	
	Exactly one
	One or many
	Zero or many
	Zero or one
Key columns	
PK	Primary key. Uniquely identifies each row.
FK	Foreign key. Points to a key in another table.
PK,FK	Both. Part of this table's key and a link to another table.
Data type column	
id	Identifier code
num	Number
text	Text or category
date	Date and time
